

SafeSpeak Scope Checklist

Completed vs Partial vs Missing assessment against the current SafeSpeak frontend repository state on March 17, 2026.

Status rules: Completed = a working frontend/UI flow clearly exists now. Partial = some UI exists, but breadth, hardening, or backend integration is incomplete. Missing = not found as a complete implementation in the current repo.

16 Completed

15 Partial

9 Missing

Completed (16)

- **AI assistant avatar animation is present**
Animated assistant sphere/avatar exists in the dashboard assistant flow. Evidence: AssistantSphereAnimated.jsx, assistant-interaction.tsx.
- **Safety-first gate with 000 and 1800RESPECT prompts is implemented**
The app opens with safety messaging and a consent/safety gate before the main experience. Evidence: layout.tsx, safety-gate.tsx.
- **Persistent Quick Exit, neutral cover screen, covert mode indicator, and safety disclaimer are implemented**
Users can instantly switch to the neutral calculator cover flow and keep safety controls visible across screens. Evidence: safety-rail.tsx, neutral/page.tsx.
- **Landing CTA and privacy framing are updated**
The frontend uses Start Secure Report and Your voice matters. Your privacy is protected. Evidence: i18n.ts and landing components.
- **Progressive disclosure and language switching are present**
FAQ/resource disclosure patterns and English/Spanish switching already exist. Evidence: faq-section.tsx, navbar.tsx, i18n.ts.
- **Dashboard emergency access and core quick actions are present**
Report New Incident, Check for Scams, Find Support, and Learn Something New are already built into the home dashboard. Evidence: dashboard-home-overview-page.tsx.
- **Smart Dialler core flow is implemented**
The frontend now includes emergency, non-emergency, support, legal, and interpreter contacts plus call scripts. Evidence: smart-dialer-modal.tsx, smart-dialer.ts, safety-rail.tsx.
- **Pre-report safety check flow is implemented**
Safety reminder, Quick Exit reminder, and covert mode options exist in the reporting experience. Evidence: report flow pages and safety rail.
- **Evidence capture UI is implemented**
The project supports audio transcription, image/screenshot evidence, document uploads, draft save, and review screens. Evidence: assistant-interaction.tsx, report-submission-evidence-page.tsx, report-submission-review-page.tsx.
- **Chain-of-custody metadata is implemented**
Evidence items now record SHA-256 hashes, timestamps, audit entries, and metadata export. Evidence: report-submission-evidence-page.tsx.
- **Cultural, faith, community, and interpreter profile settings persist locally**
The frontend stores cultural profile, faith profile, community background, interpreter language, and referral-sharing preference. Evidence: safespeak-profile.ts, use-safespeak-profile.ts, dashboard-settings-pages.tsx.

- **Warm referral context can include cultural and interpreter preferences**
Referral preparation now includes optional cultural/faith/community context and interpreter preference. Evidence: dashboard-explorer-service-details-page.tsx.
- **Support explorer surfaces emergency, legal, and community resources**
Resource/service explorer pages and warm referral preparation flows already exist. Evidence: dashboard-explorer-page.tsx, dashboard-explorer-service-details-page.tsx.
- **ScamShield UI flow is implemented**
Screenshot upload, risk result, privacy consent toggle, and prefilled reporting CTAs are present in the frontend. Evidence: dashboard-scam-shield-pages.tsx.
- **Learning and resource surfaces are implemented**
Micro-education cards plus resource and directory pages are already present. Evidence: dashboard-microeducation-page.tsx, dashboard-microcards-pages.tsx, landing resources.
- **Reports center UI is implemented**
Draft/history/status/overview screens exist in the current frontend. Evidence: dashboard-reports-pages.tsx, report-submission-history-page.tsx.

Partial (15)

- **Trauma-informed copy is improved but not fully consistent app-wide**
Major entry points use safer language, but not every screen has been fully normalized to the same trauma-informed standard.
- **WCAG 2.1 AA work is partial**
Some accessibility patterns exist, but full keyboard/screen-reader/high-contrast validation is not evidenced across the repo.
- **Trust signals and value-ladder framing are only partly surfaced**
Several trust and safety messages exist, but the full scope wording is not presented as one complete system.
- **AI legal triage is partial**
Assistant flows and legal-information disclaimers exist, but NSW-specific explainers and issue classification are limited.
- **Cultural adaptation is partial**
Profiles now affect settings and warm referrals, but most content does not yet adapt app-wide by culture/faith/community.
- **Smart Dialler coverage is partial**
Core numbers and scripts exist, but broader location-aware university, school, and multicultural coverage is limited.
- **Silent/covert assistance support is partial**
Covert mode exists, but silent-help workflows and service-specific guidance are not yet comprehensive.
- **Evidence vault security is partial**
Chain-of-custody metadata exists, but encrypted local vault storage, device keystore backing, and consented cloud sync are not in this repo.
- **Smart routing and submission tracking are partial**
Destination and report-status UI exist, but backend routing and live submission integration appear incomplete.
- **ScamShield analysis is partial**
Result screens exist, but OCR, email analysis, link checking, and live analysis/scoring are not end-to-end.
- **Specialized support matching is partial**
Legal and community support directories exist, but advocate matching and all specialist cohort flows are limited.
- **Interactive learning is partial**
Micro-education exists, but 8-language multimedia support and progress tracking are incomplete.

- **Privacy and consent dashboarding is partial**
Privacy policy screens, settings, consent toggles, and evidence metadata export exist, but deletion/access-history tooling is incomplete.
- **My Reports Center is partial**
History and status UI exist, but update, withdraw, and impact-dashboard capabilities are incomplete.
- **Admin console is partial**
A frontend shell exists, but live content/taxonomy/destination/language-pack management integrations are not implemented.
Evidence: `app/admin/page.tsx`.

Missing (9)

- **End-to-end 8-language support is not present**
The current repo supports English and Spanish, not the full 8-language scope requirement.
- **Local-first encrypted evidence vault backed by device keystore is missing**
Evidence metadata is present, but secure encrypted asset storage is not implemented in the repo.
- **Optional Australian-region cloud sync for evidence is missing**
No consented cloud-sync layer for evidence assets was found in the current codebase.
- **Signed immutable audit logging is missing**
An audit trail exists, but it is not cryptographically signed or immutable.
- **Full NSW legal explainers by jurisdiction are missing**
The current assistant does not provide the full jurisdiction-specific legal triage layer described in the scope.
- **University/school dialler contacts and richer location-aware dialing are missing**
The new smart dialler covers core public services, but campus/school-specific and richer location logic are not implemented.
- **Real OCR, email analysis, and link-checking pipeline for ScamShield is missing**
The repo includes UI and result flows, but not the full analysis backend described in the PDF.
- **Live update/withdraw flows and impact dashboard are missing**
The reports center has UI scaffolding, but these capabilities are not implemented end-to-end.
- **Full privacy dashboard for deletion requests and access history is missing**
Deletion/access-history management is not present as a complete user-facing dashboard.
